

### **8-706. Logging; auditable events.**

Security safeguard regulations require logging and reviewing events that are determined to have a moderate or above level of risk. Auditable events may be incorporated into system auto logs and change management documents. The following events should be logged and reviewed on a weekly basis:

- (1) Log on and off the system;
- (2) Change of password;
- (3) All system administrator commands, while logged on as system administrator;
- (4) Switching accounts or running privileged actions from another account (e.g., Linux/Unix SU or Windows RUNAS);
- (5) Creation or modification of super-user groups;
- (6) Subset of security administrator commands, while logged on in the security administrator role;
- (7) Subset of system administrator commands, while logged on in the user role;
- (8) Clearing of the audit log file;
- (9) Startup and shutdown of audit functions;
- (10) Use of identification and authentication mechanisms (e.g., user ID and password);
- (11) Change of file or user permissions or privileges (e.g., use of suid/guid, chown, su);
- (12) Remote access outside of the corporate network communication channels (e.g., modems, dedicated VPN) and all dial-in access to the system;
- (13) Changes made to an application or database by a batch file;
- (14) Application-critical record changes;
- (15) Changes to database or application records, where the application has been bypassed to produce the change (via a file or other database utility);
- (16) All system and data interactions concerning FTI;
- (17) Additional platform-specific events, as defined by agency needs or requirements;
- (18) Detection of suspicious or malicious activity such as from an intrusion detection or prevention system (IDS/IPS), anti-virus system, or anti-spyware system; and

(19) Physical entrance or access to secured and restricted areas or facilities where system and network infrastructure reside.
