Subject: Fw: blocking e-mail with attachments

I haven't been able to review this entire document, but the part that suggests renaming a document to Proposal.exe.ForSue could get blocked by some systems because they don't look at just the extension, they look for .exe anywhere in the file name. ProposalEXE.ForSue should work. Zipping and sending in a zip file should work as well, unless we want to try to block attachments in zip files. Some software can do and some can not.
