

8-206. Facilities; physical security requirements.

Agencies must perform a periodic threat and risk assessment to determine the security risks to facilities that contain state information, and implement reasonable and appropriate physical security measures to prevent and detect unauthorized access, theft, damage or interference.

Based on the threat and risk assessment, a multi-layered physical security perimeter must be established in agency environments where information or information assets are stored or where operational data centers, network wiring closets, or telephony connection equipment exists, or where printers that print HIGH IMPACT or MODERATE IMPACT information are used, and any other location where information may be in use or stored, such as file cabinets, microfiche storage areas, etc. The security layers create a perimeter that would require multiple methods of access control to gain entry. These layers could be in the form of an entry point with card key access, a staffed reception area, a locked cabinet or office, or another physical barrier. HIGH IMPACT or MODERATE IMPACT information must maintain at least two barriers to access at all times.
